

PRESERVE THE VIEW- DIM THE SUN

LuXout Solar Shades help create environments that are comfortable, healthy and productive. Our products minimize environmental impact while meeting the most demanding residential requirements and commercial applications.

1 - DAYLIGHTING

Contact with the outdoors is a proven factor in a person's mental state and productivity. Windows offer views and admit plenty of daylight. Roller shades manage & optimize natural daylight, helping to reduce dependency on artificial lighting.

2 - GLARE CONTROL

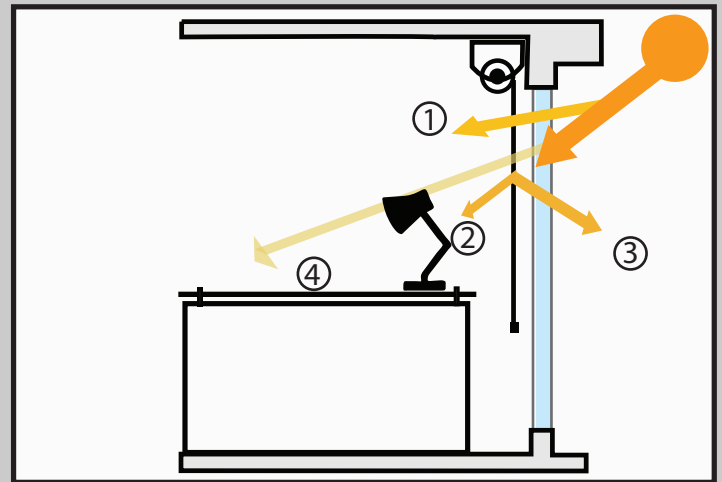

Roller shades allow homeowners or employees to control the direction and amount of sunlight entering their space with light-filtering fabrics that reduce glare and reflections. Hundreds of fabric choices enable precise levels of daylight control including 1-3% open fabrics for privacy and room darkening. 5-10% open fabrics that will filter glare all while allowing an interior view to the outdoors and privacy during daylight from the outdoors.

3 - AESTHETICS

LuXout Solar Shades filter daylight to create even, glare-free lighting levels. They also ensure privacy and can provide a consistent look from the exterior of a building.

4 - MANAGEMENT OF THERMAL HEAT GAIN

LuXout Solar Shades manage heat generated by the sun. They can be closed to minimize solar heat gain or they can be raised to allow solar heating.

5 - INDOOR AIR QUALITY

Poor air quality is a common source of inhabitant complaints. Many of our solar fabrics are certified for low emissions by the GREENGUARD Environmental Institute and pass the stricter requirements of GREENGUARD Gold, and are GREENGUARD listed for Microbial Resistance. Careful selection of low emitting materials such as solar screen fabrics minimize the presence of contaminants such as volatile organic compounds (VOC's), odors, and dust.
